WT_21mo
Mean fragments per million admitted fragments
(log color scale; unweighted mean across mice)
10^5
10^4
10^3
10^2
Animals detected
25% (1/4)
50% (2/4)
75% (3/4)
100% (4/4)
Provisional published-calibrated Microglia labels; 20 independent mice, 4 per condition
Detection means ≥1 primary fragment in a mouse; zero detection has no dot. No significance encoded.
