TrackerSci Figure 3 — deposited-data reconstruction and labelled adaptations

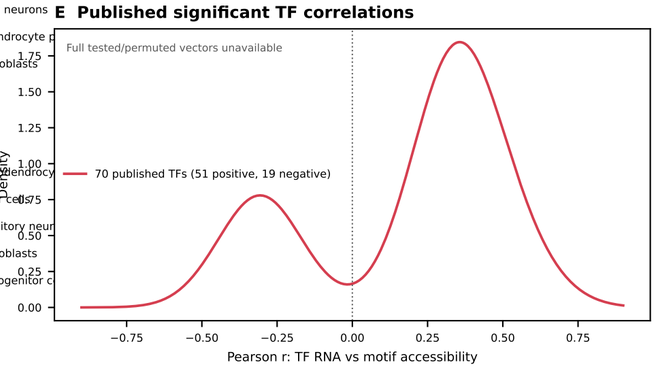

A Cell-type-specific DE genes with concordant DA promoters (1,744)

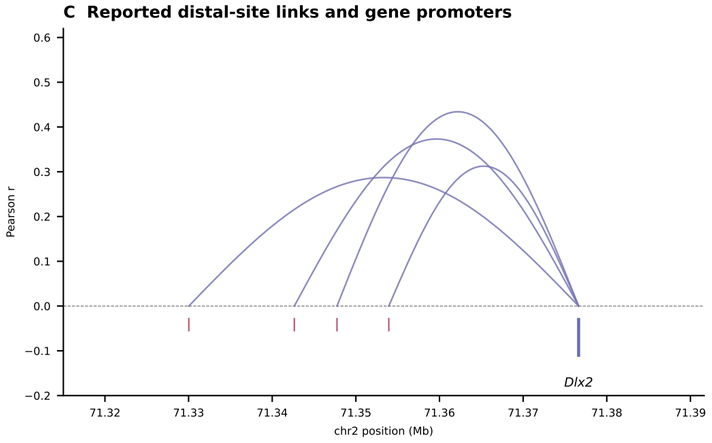

B Published significant peak–gene links

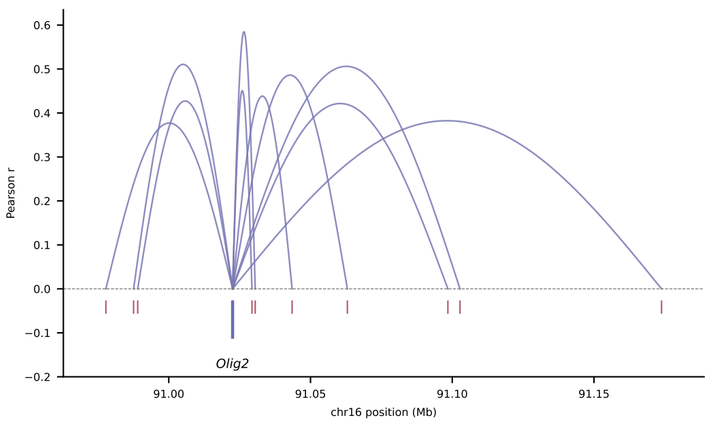

E Published significant TF correlations

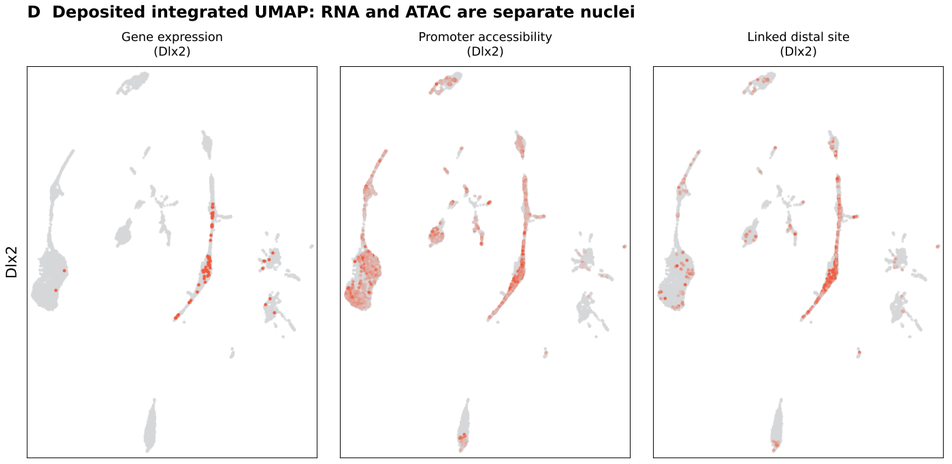

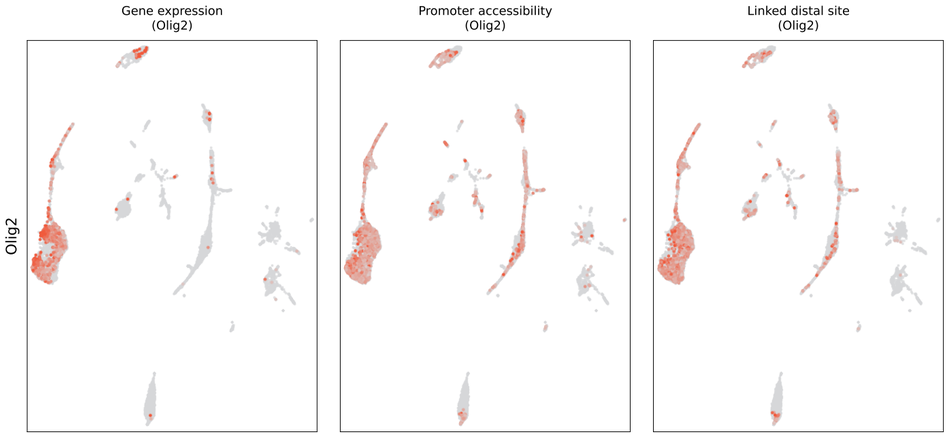

C Reported distal-site links and gene promoters

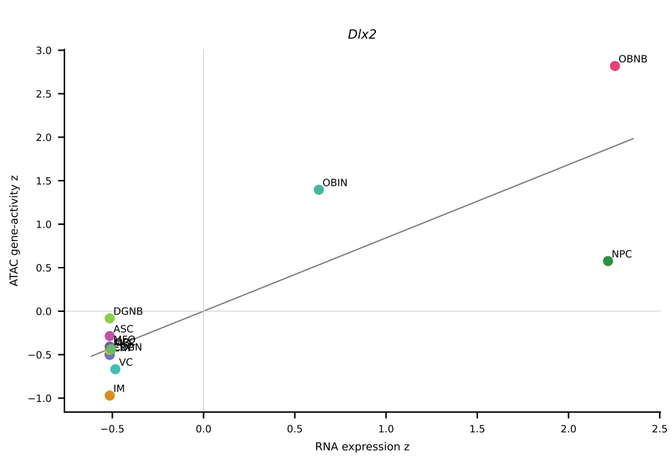

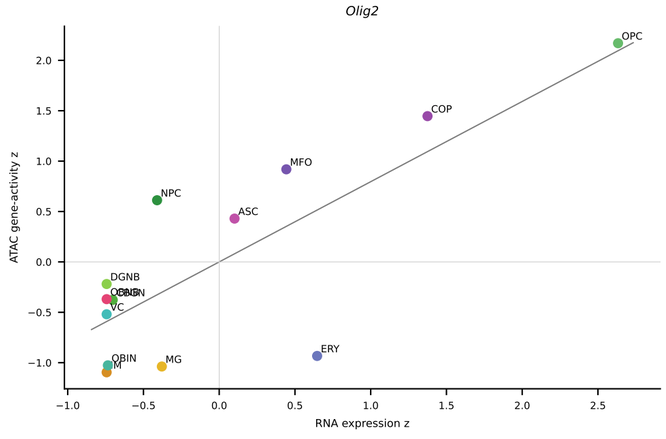

D Deposited integrated UMAP: RNA and ATAC are separate nuclei

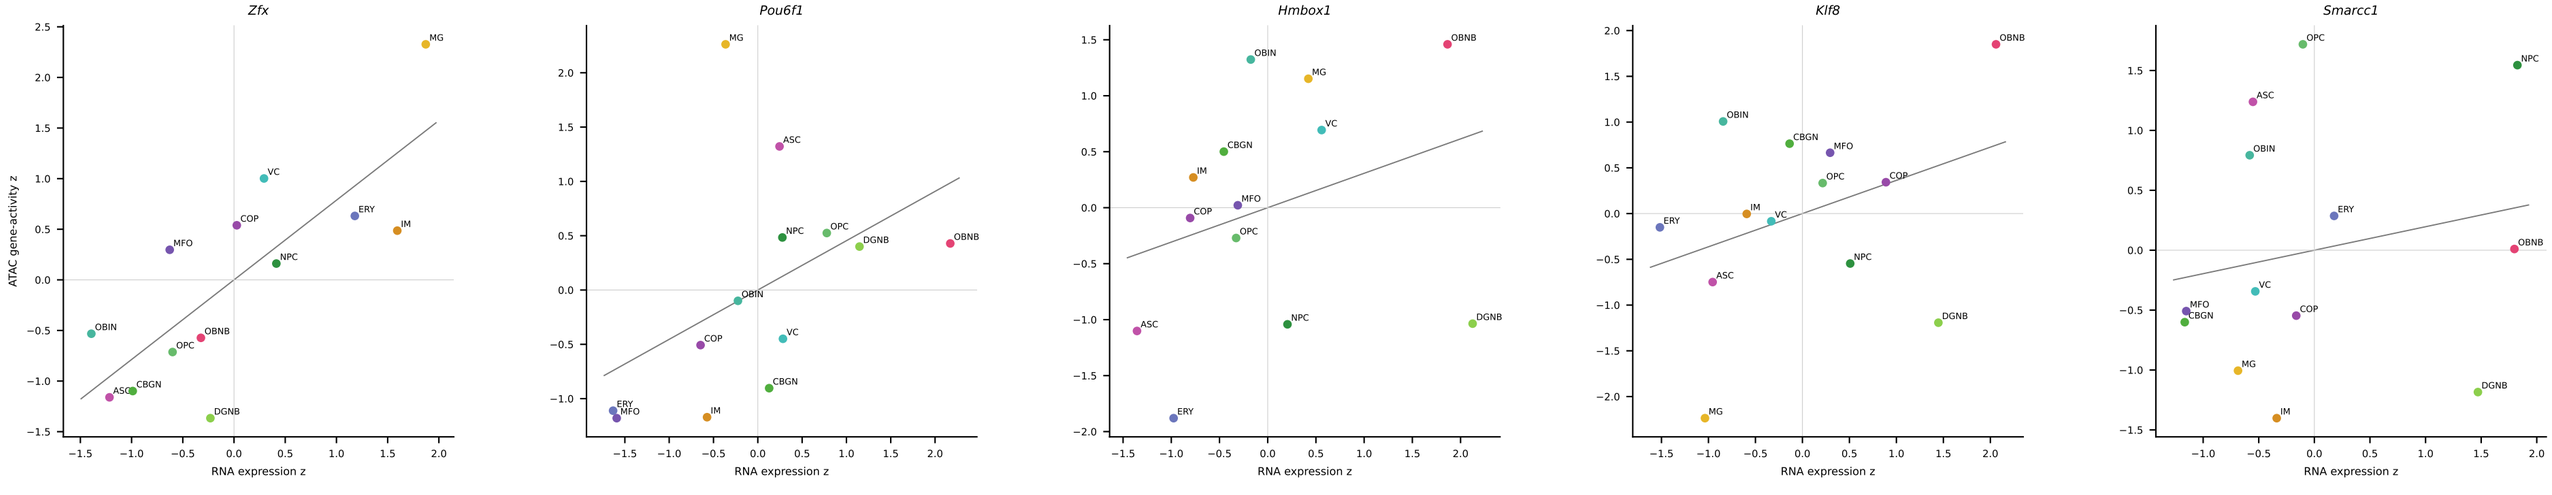

F Adapted: RNA vs ATAC gene activity (TF motif scores unavailable)

G Adapted seven-TF comparison: gene activity proxy

Source: Lu et al., Cell 2023, DOI 10.1016/j.cell.2023.08.042; GEO GSE212251 (mm39); Tables S2A/B, S3A/B. A/C/D are recomputed from GEO and author tables. B/E show significant reported rows only, not full null distributions. F/G use ATAC gene activity, NOT motif accessibility. RNA and ATAC are distinct nuclei. This is not our GSE212606 cohort.
