Microglia · chromosome-block TE and signal densities · mm10

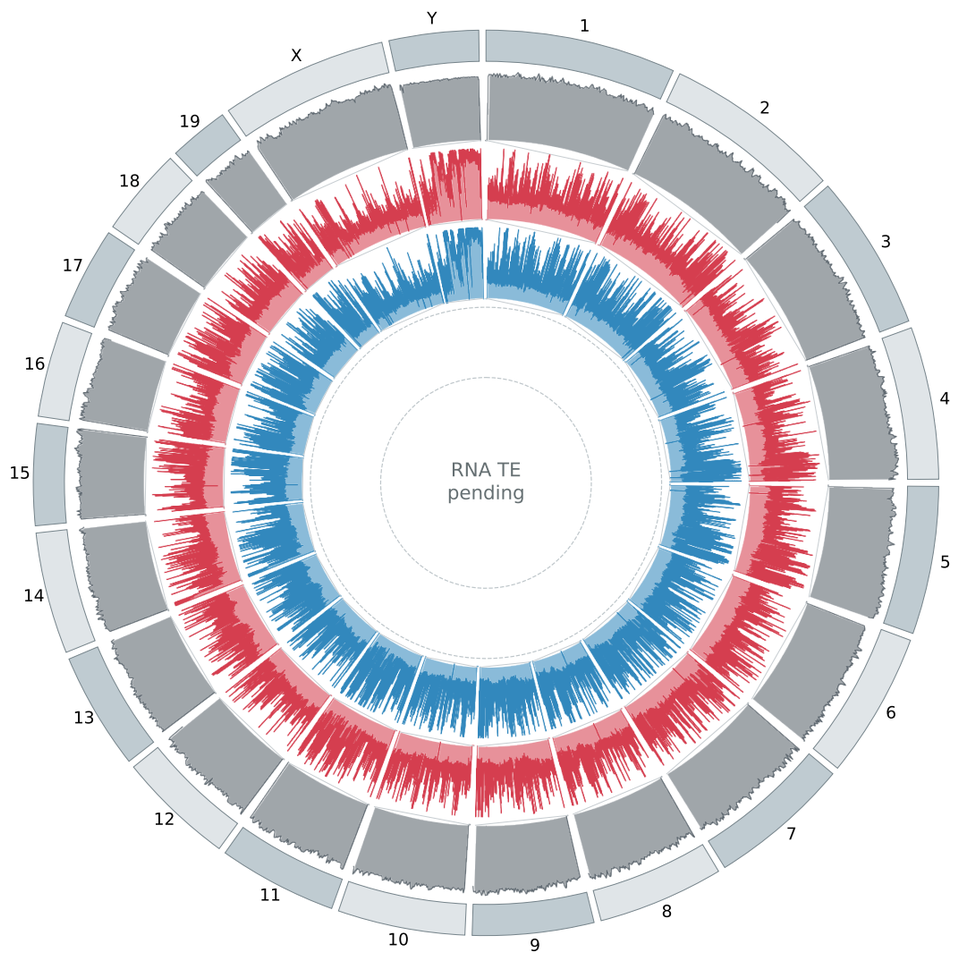

WT_6mo versus WT_3mo

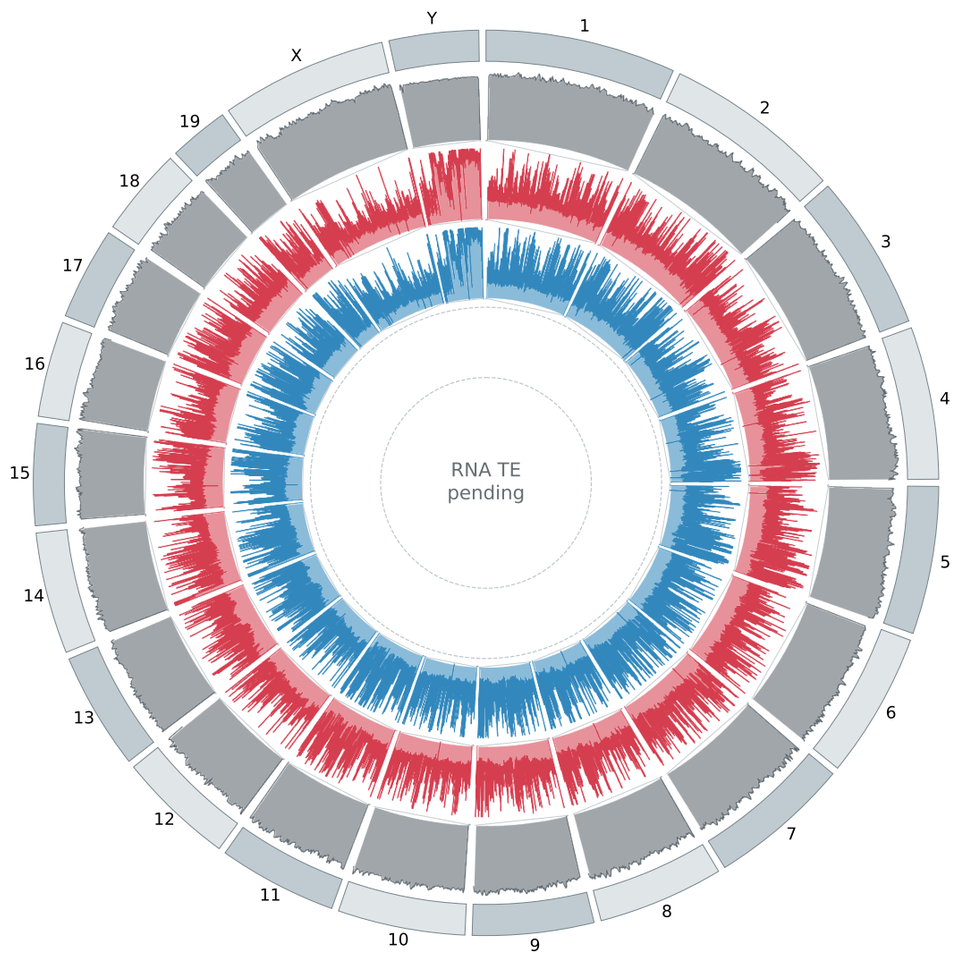

WT_21mo versus WT_3mo

5xFAD_3mo versus WT_3mo

APOE4_TREM2_3mo versus WT_3mo

Outer → inner: chromosome blocks; 1 Mb TE interval density (grey); 100 kb target ATAC (red); 100 kb WT_3mo ATAC (blue); RNA TE copy-level counts pending.

Curves show log1p signal on a shared scale per assay; height is clipped at the 99th percentile. RNA overlaps are descriptive mapped reads, not locus-specific IRescue UMI expression.
