Older vs younger WT mice: RNA, ATAC and ETnERV2-int

Inner → outer: RNA genes, all ATAC peaks, TE-overlapping ATAC peaks, ETnERV2-int copy locations.
ETnERV2-int RNA subfamily log2FC = +0.703 (within-contrast FDR = 0.020; pooled four-contrast FDR = 0.082).
The copy-position ring is genomic context, not expression or accessibility of each TE copy.
