Mouse TE classes, families and subfamilies by divergence from consensus

Circular taxonomy inspired by the supplied layout; branches show annotation levels, not evolutionary distance.

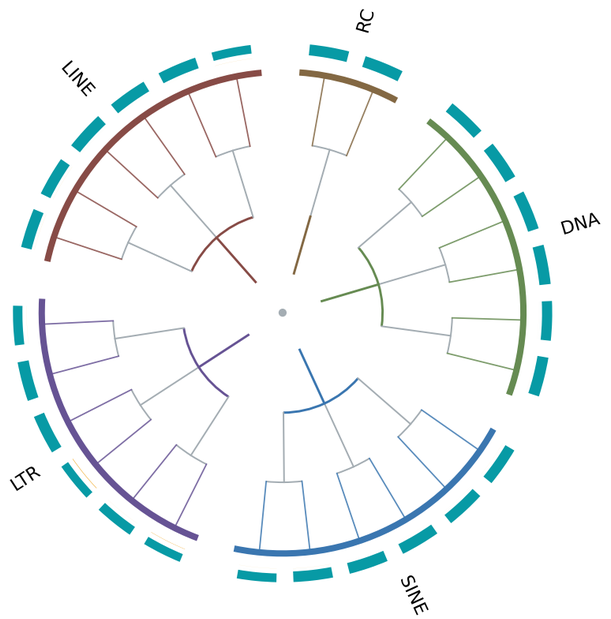

A RepeatMasker TE hierarchy

B Lower divergence (<10%)

C Higher divergence (≥20%)

Lower divergence, often younger Higher divergence, often older

mm10 primary chromosomes · LINE/LTR/SINE/DNA/RC · selected abundant subfamilies shown; full counts in TSV. Middle divergence (10–<20%) retained in TSV. RepeatMasker divergence does not date insertion.
