Microglial H3K9me3 at TE-bearing ATAC loci (public 3-week reference)

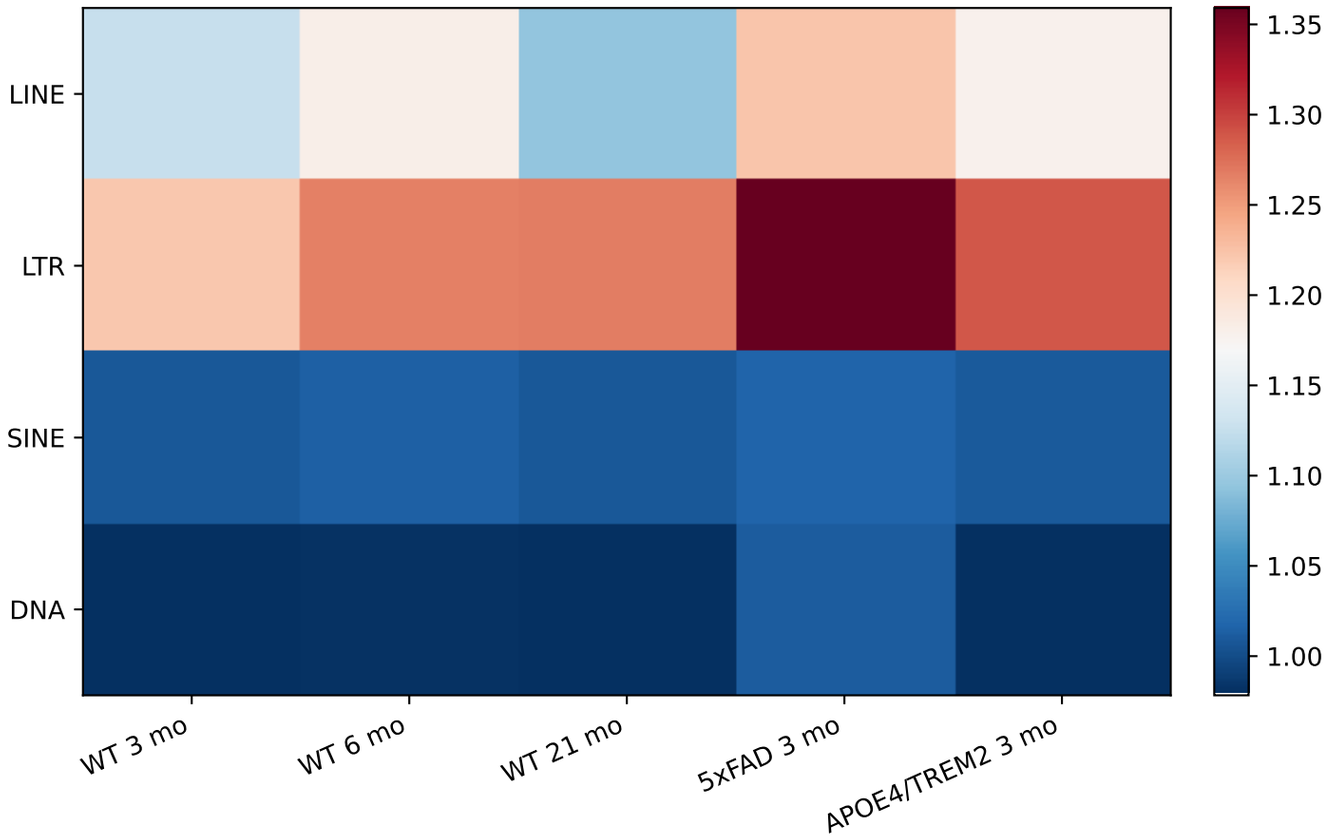

TE copies in each called-peak set

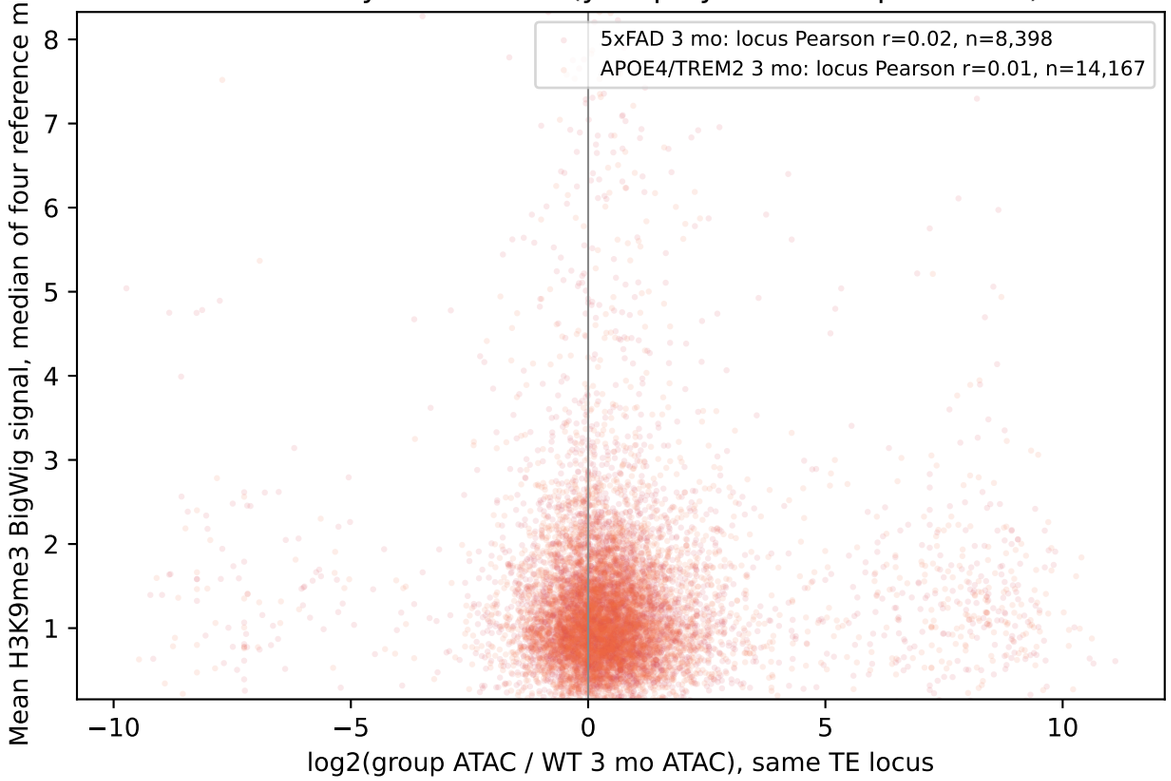

Locus-level distribution (display: 1st–99th percentile)

Median signal by TE class

Cross-study association (y display: 1st–99th percentile)

Reference mice differ in age and condition from our ATAC mice. No within-animal loss of H3K9me3 is inferred.
Peak absent in WT means no called WT peak, not zero WT reads. Loci can belong to multiple target sets.
