# Embryonic stem-cell H4K20me3 at TE-bearing ATAC loci (context only)

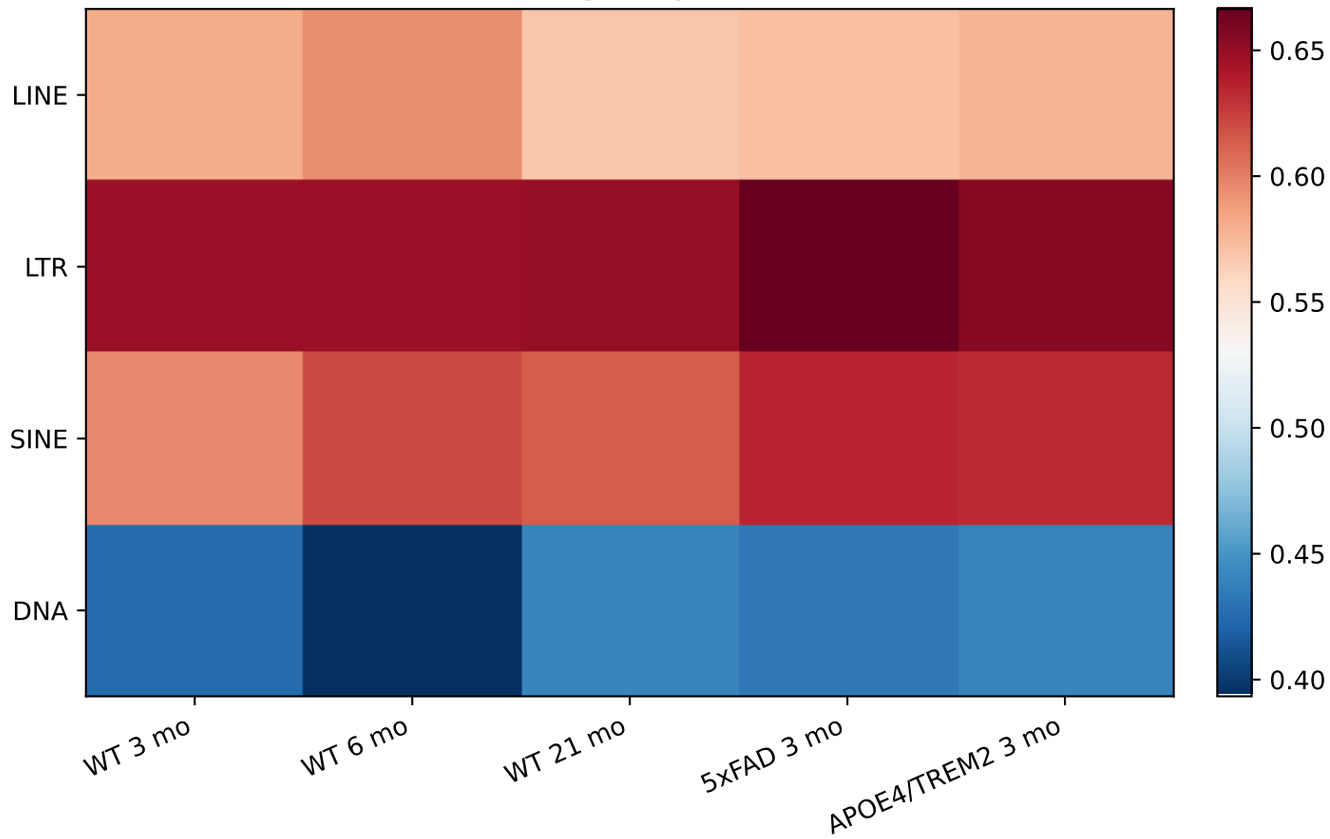

## TE copies in each called-peak set

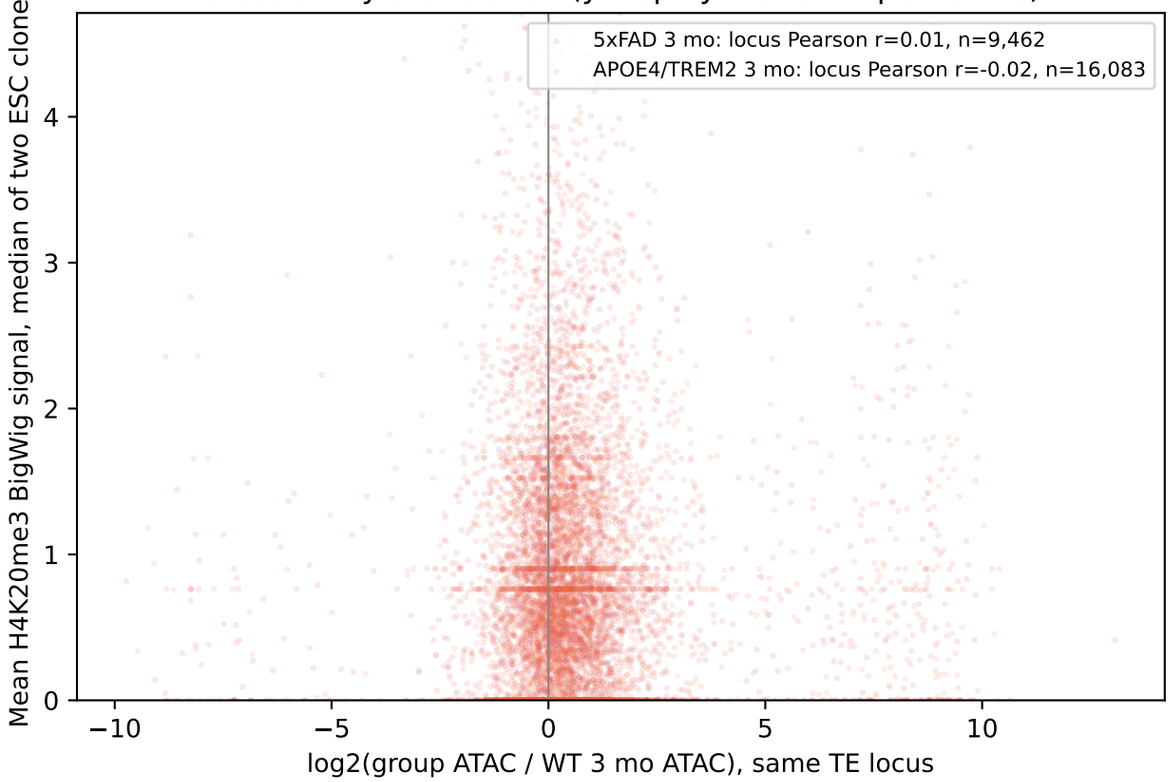

## Locus-level distribution (display: 1st–99th percentile)

## Median signal by TE class

## Cross-study association (y display: 1st–99th percentile)

Embryonic stem cells are not Microglia. These values cannot measure Microglia H4K20me3 loss.
Peak absent in WT means no called WT peak, not zero WT reads. Loci can belong to multiple target sets.
