Same target-defined TE copies, same 20 animals, two separate assays
Four independent mice per condition; ATAC sets selected using these animals; ATAC plots are descriptive
WT_6mo
WT_21mo
5xFAD_3mo
APOE4_TREM2_3mo
Relative ATAC signal
WT_3mo median = 1
RNA with gene-TMM normalization
WT_3mo median = 1

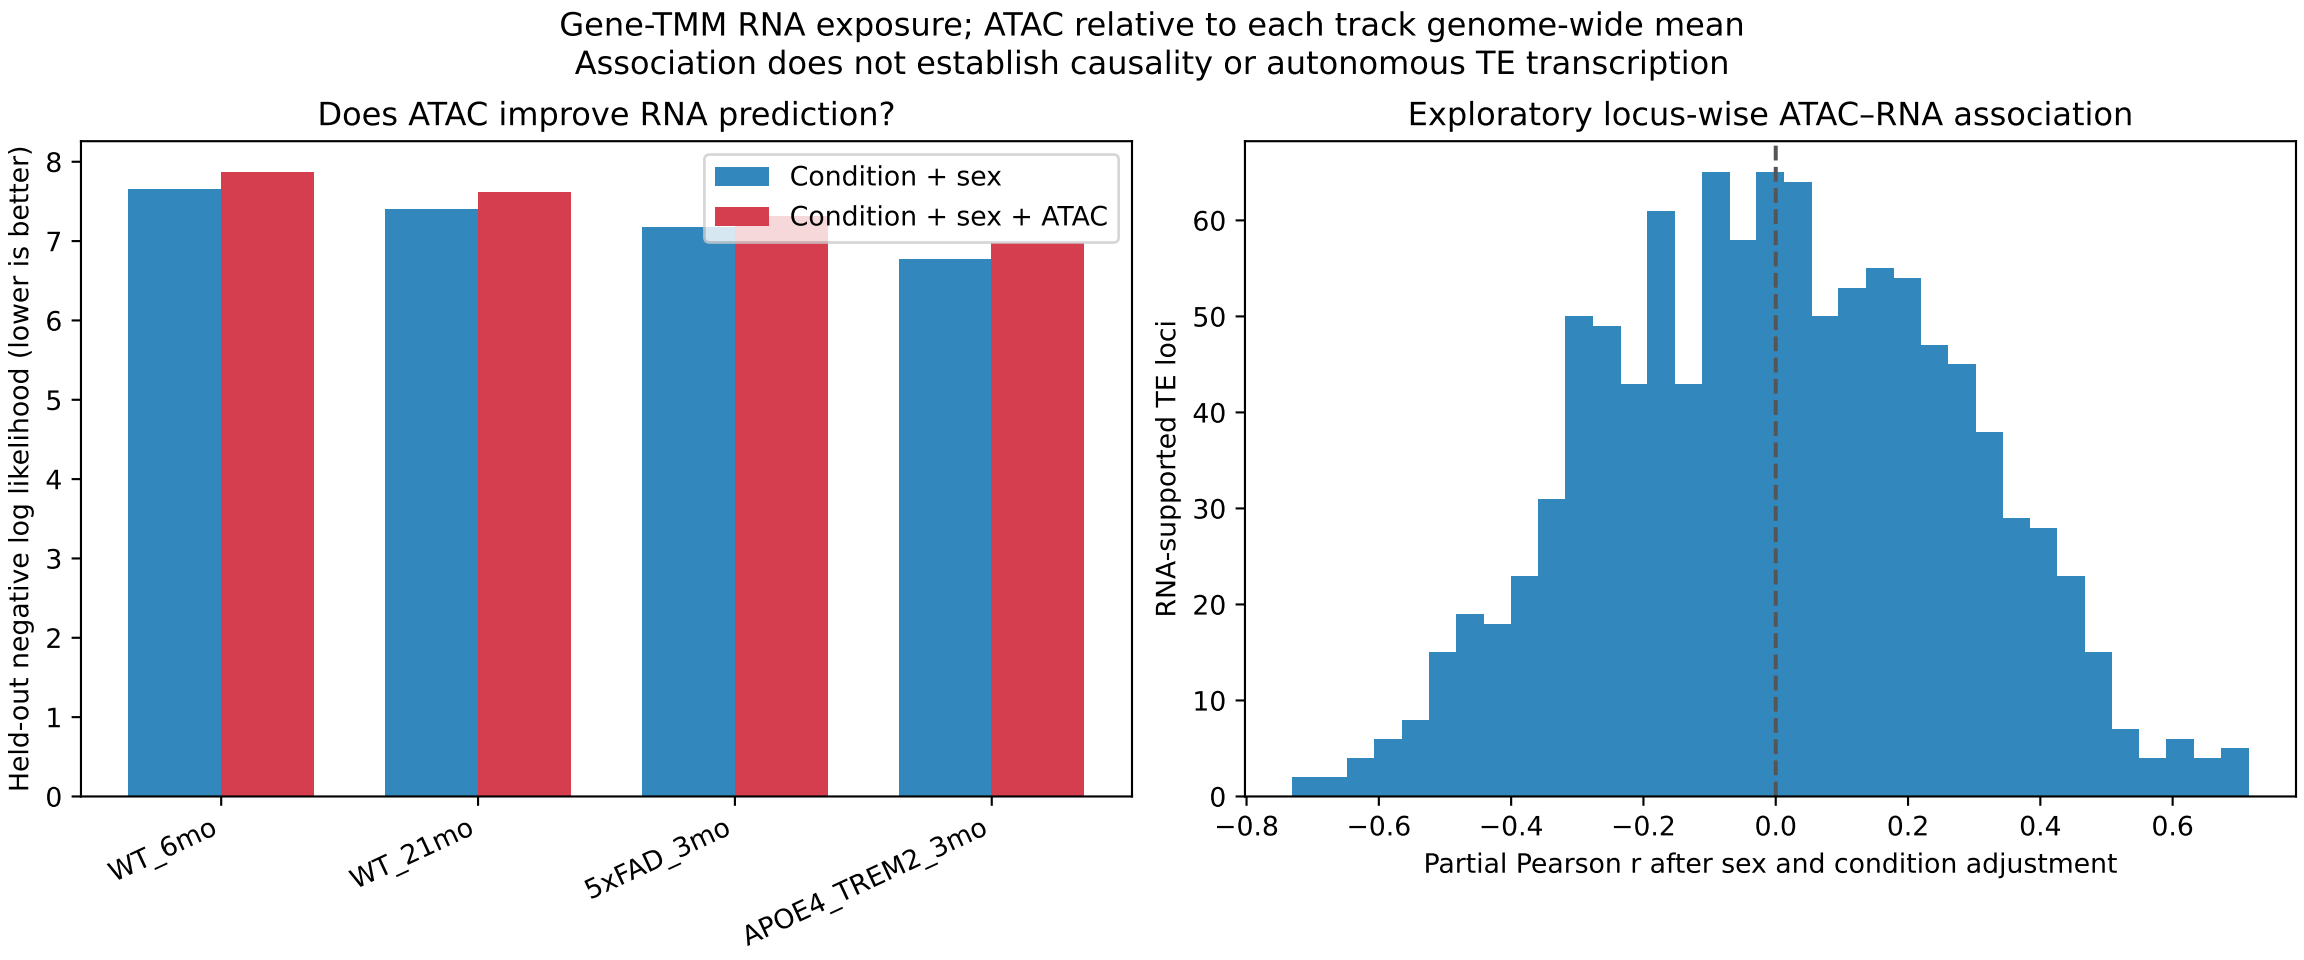
0.8
WT_3mo
WT_6mo
WT_21mo
5xFAD_3mo
APOE4_TREM2_3mo



Gene-TMM RNA exposure; ATAC relative to each track genome-wide mean
Association does not establish causality or autonomous TE transcription
Does ATAC improve RNA prediction?
Held-out negative log likelihood (lower is better)
Condition + sex
Condition + sex + ATAC
WT_6mo
WT_21mo
5xFAD_3mo
APOE4_TREM2_3mo
Exploratory locus-wise ATAC–RNA association
RNA-supported TE loci
Partial Pearson r after sex and condition adjustment
