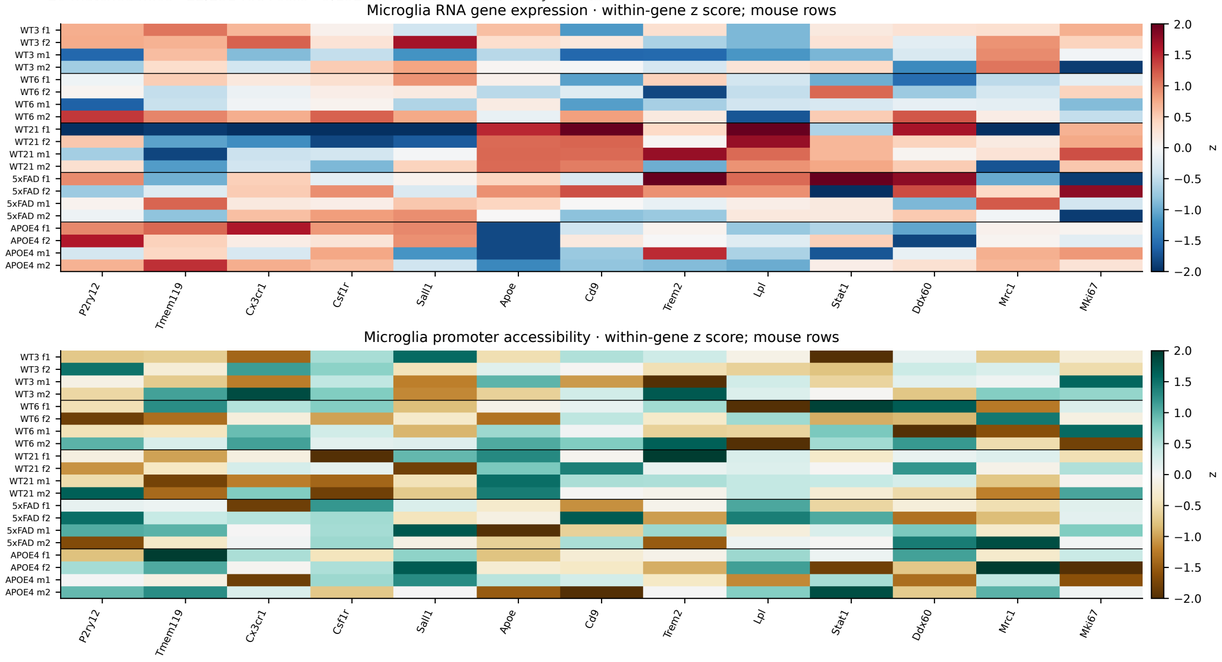

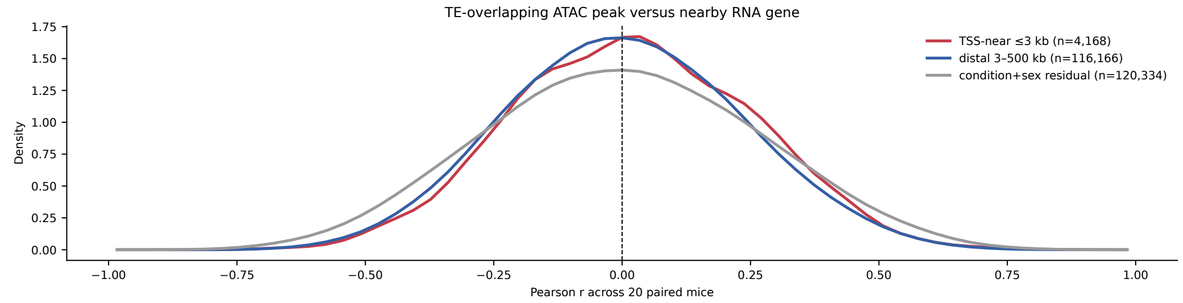

# Figure 3 adaptation | Microglia RNA, ATAC and TE-associated peaks

20 matched mice · 22,251 RNA cells · 9,152 ATAC cells · mm10; assays contain different nuclei

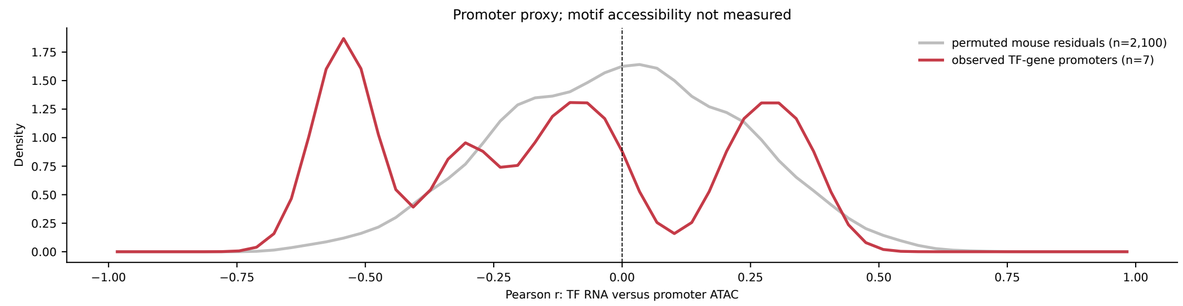

A

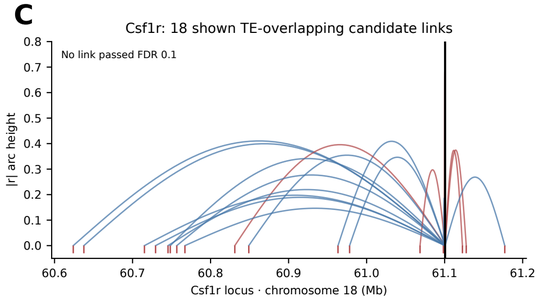

B

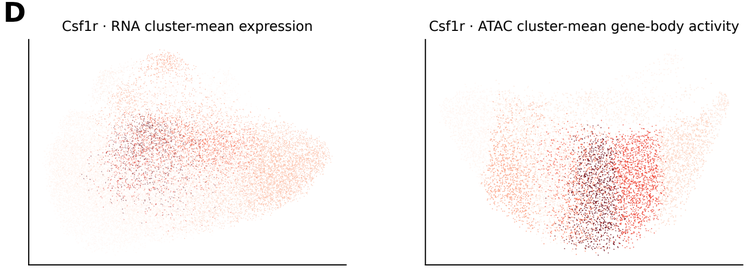

E

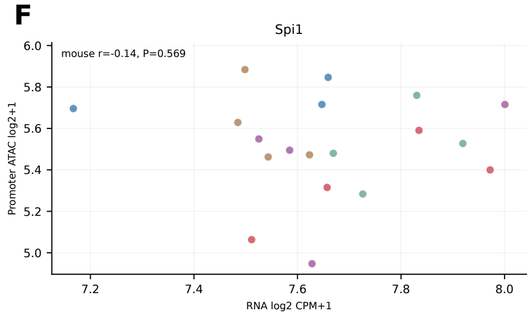

C

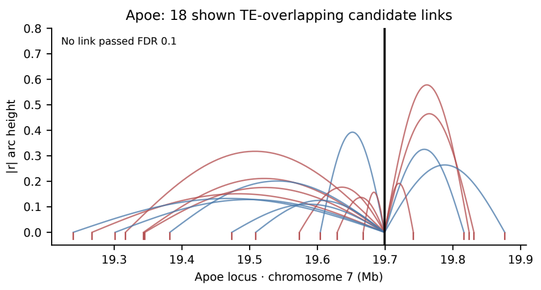

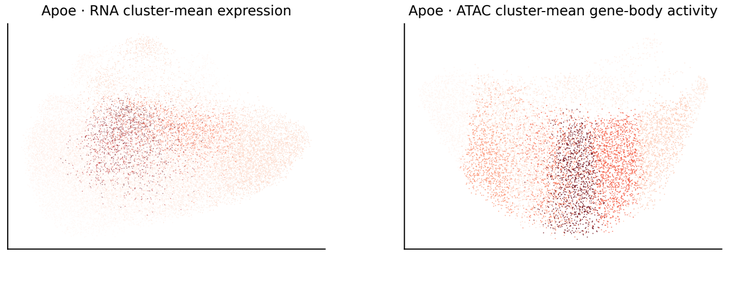

D

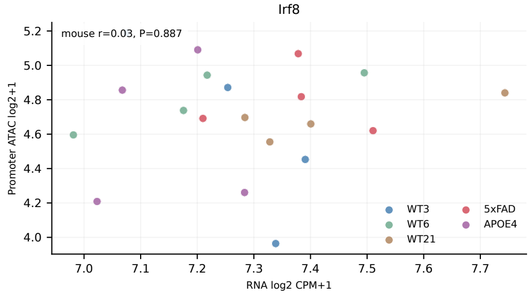

F

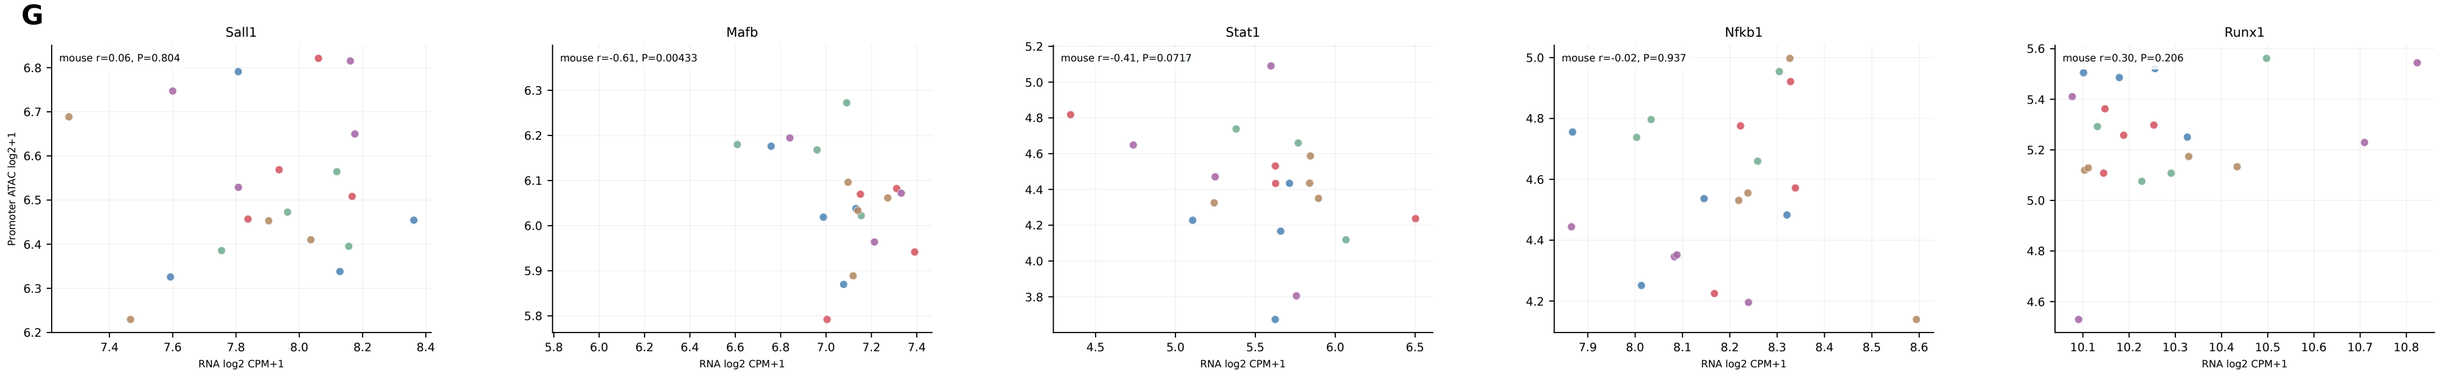

G

A: source-count mouse heatmaps. B/C: TE-cCRE links are exploratory; none has FDR ≤0.1. D: UMAP colours are cluster means, and TE peak is a separate mouse-level plot. E–G: promoter ATAC proxy, not TF motif accessibility. RNA and ATAC are different nuclei.
